Analyzing

What is Scopus?

- **Scopus, the largest abstract and citation database of peer-reviewed literature, features smart tools to track, analyze and visualize research**
- **Scopus delivers the most comprehensive overview of the world's research output in the fields of science, technology, medicine, social sciences and Arts & Humanities**

What content is included in Scopus?

Journals

- More than 60 million records in Scopus, which includes:
 - Over 22,000 peer-reviewed journals
 - more than 4,200 are full open access
 - Articles-in-press (i.e., articles that have been accepted for publication) from more than 5,000 international publishers

- More than 113,000 books and 10,000 added each year (Coverage years: Back to 2003 for all subject areas)
- 7.2 Million conference papers
- 27 million patents

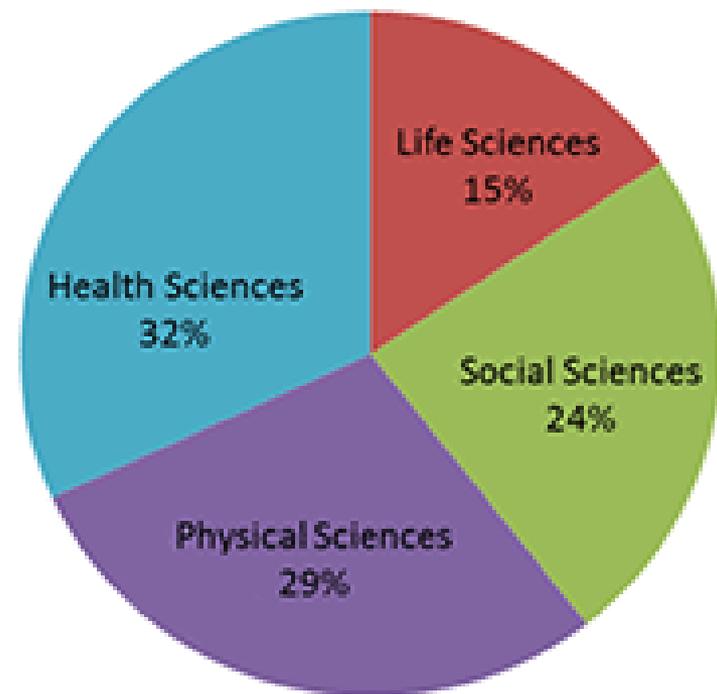

- 70% with abstracts
- Provides 100% Medline coverage
- Approximately 3 million new records are added each year via daily updates (5,500/day)
- fields of science, technology, medicine, social sciences and arts and humanities

- Is a bibliographic database containing abstracts and citations
- It is owned by Elsevier and is available online by subscription.
- Scopus offers:
 - author profiles which cover affiliations,
 - number of publications and their bibliographic data,
 - the number of citations each published
 - H-index and CiteScore
- Scopus can be integrated with **ORCID**

Scopus Coverage

- ✓ Abstracts and Citations
- ✓ Over 50 Million Items
- ✓ Over 20 Thousand Peer-Reviewed Journals

Journal Metrics

Scopus Journal Metrics offer the value of context with their citation measuring tools. The metrics allow for direct comparison of journals, independent of their subject classification. To learn more, visit: www.journalmetrics.com.

SJR = SCImago Journal Rank is weighted by the prestige of a journal. Subject field, quality and reputation of the journal have a direct effect on the value of a citation. SJR also normalizes for differences in citation behavior between subject fields.

IPP = Impact per Publication (IPP) measures the ratio of citations per article published in the journal.

SNIP = Source Normalized

[Top of page](#) ▲

To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

DISTINGUISH YOURSELF IN THREE EASY STEPS

ORCID provides a persistent digital identifier that distinguishes you from every other researcher and, through integration in key research workflows such as manuscript and grant submission, supports automated linkages between you and your professional activities ensuring that your work is recognized. [Find out more.](#)

1

REGISTER Get your unique ORCID identifier [Register now!](#)
Registration takes 30 seconds.

2

ADD YOUR INFO Enhance your ORCID record with your professional information and link to your other identifiers (such as Scopus or ResearcherID or LinkedIn).

3

USE YOUR ORCID ID Include your ORCID identifier on your Webpage, when you submit publications, apply for grants, and in any research workflow to ensure you get credit for your work.

My Scopus

The Scopus Author Identifier assigns a unique number to groups of documents written by the same author via an algorithm that matches authorship based on a certain criteria. If a document cannot be confidently matched with an author identifier, it is grouped separately. In this case, you may see more than 1 entry for the same author.

H-Index

- H-Index شاخص جدیدی از شاخص‌های علم‌سنجی است.
- این شاخص در سال ۲۰۰۵ میلادی توسط Jorge Hirsch در دانشگاه کالیفرنیا ابداع شد.
- این شاخص در واقع با هدف ارزیابی کیفی اثر و ارزیابی کمی برون‌داد پژوهشی محققین ابداع شده است.
- مفهوم H-Index عبارت است از تعداد مقالات نویسنده که تعداد ارجاعات برابر با h و یا بیشتر از آن دارند.
- مثلاً چنانچه H-Index محقق h باشد، مفهوم آن این است که این محقق حداقل h مقاله منتشر شده دارد که هرکدام حداقل h استناد یا Citation دارند. به عبارت دیگر مفهوم آن این است که سایر مقالات این محقق کمتر از h استناد دارند.
- امروزه این شاخص معادل Impact Factor برای محققین محسوب می‌شود.

H-Index - Jorge E. Hirsch (Physicist,)2005

h-index is the highest number of a scholar's papers, h , that have each received at least h citations

times 22 cited or more

22 papers

Documents (77)

This author's *h-index* is 11

The *h-index* is based upon the number of documents and number of citations.

Note: Scopus is in progress of updating pre-1996 cited references going back to 1970. The *h-index* might increase over time.

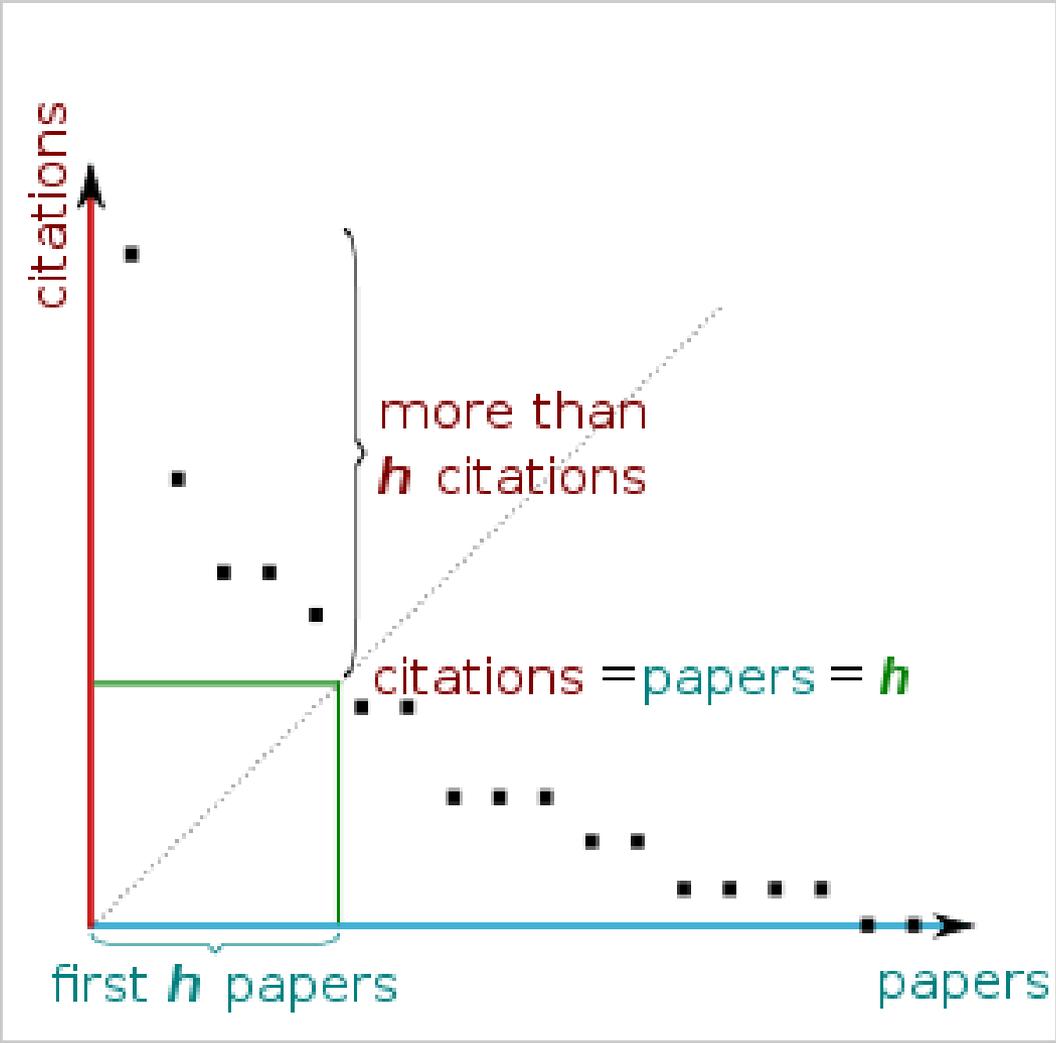

روش تعیین اچ ایندکس به صورت دستی

برای به دست آوردن عدد H به صورت دستی، پس از جستجوی نویسنده مورد نظر و مشاهده نتایج در سالهای مختلف، مقالات را بر حسب استناد به ترتیب نزولی مرتب کنید و تعداد مقالات را با تعداد استنادها مقایسه نمایید تا جایی که تعداد استناد مساوی یا بیشتر از شماره مقاله باشد.

شماره آن مقاله، نشان‌دهنده شاخص H نویسنده است.

۱	۲	۳	۴	۵	*۶	۷	۸	۹	۱۰	تعداد مقالات
۱۲	۱۰	۱۰	۹	۸	۶	۵	۳	۱	۰	تعداد استنادات

محاسبه شاخص اچ برای یک پژوهشگر فرضی

اندازه گیری دقیق شاخص H به جامعیت پایگاه
اطلاعاتی مورد جستجو بستگی دارد.

به طوری که ممکن است شاخص H به دست
آمده از پایگاه های مختلف که در اسلایدهای
قبل ذکر شد یکسان نباشد.

ELSEVIER

SCImago Journal Rank (SJR)

- تاثیر علمی مجلات پژوهشی را با توجه به تعداد استنادات به مجله و اهمیت یا پرستیژ آن می سنجد.
- شاخص اعتبار یا پرستیژ یک ژورنال بر این اساس است که همه استنادات دارای وزن برابر نیستند
- پرستیژ با استفاده از الگوریتمی مانند الگوریتم **PageRank** موتور جستجوی گوگل برآورد می شود و دربرگیرنده ارزش علمی ژورنال ارجاع دهنده است.
- در این شاخص، حوزه موضوعی، کیفیت و شهرت یا اعتبار مجله در سنجش ارزش استنادات اثر دارد.
- برای برآورد این شاخص، از آنالیز ۳ ساله داده های پایگاه Scopus از سال ۱۹۹۶ استفاده می شود.

Source Normalized Impact per Paper (SNIP)

- شاخص عامل تاثیر به هنجار شده بر اساس منبع بر مبنای داده‌های برگرفته از پایگاه اسکوپوس محاسبه می‌شود
- عامل تاثیر بر **پتانسیل استنادی پایگاه در رشته مربوطه** تقسیم می‌شود تا تفاوت‌های رشته‌ها به لحاظ رفتار استنادی و نیز به لحاظ میزان پوشش در پایگاه تصحیح شود.
- پتانسیل استنادی عبارت است از میانگین شمار ارجاعات سه ساله بر مقاله در یک مجله.
- تنها ارجاعاتی محاسبه می‌شود که مجلات آنها در پایگاه نمایه می‌شوند، این شاخص **بیانگر پتانسیل استنادی پایگاه** خواهد بود. در واقع پتانسیل استنادی بازتابی از این است که **چقدر احتمال دارد به یک منبع در یک رشته خاص استناد شود**. نشان داده شده است که ۸۰ درصد از ارجاعات سکوپوس در خود این پایگاه نمایه شده‌اند.

مراحل محاسبه SNIP به طور ساده به شرح ذیل است :

۱. مقالاتی که به مقالات (۱-۳ ساله) یک مجله خاص استناد کرده‌اند شناسایی می‌شوند؛
۲. فهرست ارجاعات مقالات استناد کننده به این مقالات شناسایی می‌شوند؛
۳. تعداد ارجاعات هر یک از مقالات استناد کننده به این مقالات شمارش می‌شوند؛
۴. حال میانگین این استنادها محاسبه می‌شود تا پتانسیل استنادی پایگاه به دست آید؛
۵. عامل تاثیر در مدت سه سال سنجیده می‌شود
۶. عامل تاثیر بر پتانسیل استنادی پایگاه تقسیم می‌شود تا SNIP آن به دست آید.

برای مثال برای مجله cell در سال ۲۰۱۴ داریم:

IF مجله در سال ۲۰۱۴ (تعداد استنادات به مقالات مجله CELL به تعداد مقالات مجله)

-----=SNIP

پتانسیل استنادی در رشته تحت پوشش مجله در ۲۰۱۴

(تعداد استنادات به مقاله های مجله در سه سال بر تعداد کل رفرنسهای مقالات استناد کننده)

Impact per Publication (IPP)

The IPP measures the ratio of citations in a year (Y) to scholarly papers published in the **three previous years** (Y-1, Y-2, Y-3) divided by the number of scholarly papers published in those same years (Y-1, Y-2, Y-3).
